

C.S.I

You have just arrived at the crime scene where a famous movie star has been killed!

It is your assignment to tighten the hold and find the guilty.

The leader of the investigation is already at the crime scene and has cordoned off the area that is full of clues and evidence, which absolutely must not be destroyed.

With this murder mystery Vice Versa invites you into the universe of investigation. Teamwork, thoroughness and ingenuity are of highest importance and it is your task to solve the murder riddle based on the clues found in the area.

Before the investigation starts you will be thoroughly briefed on the case. Specialists will instruct you how to read the clues that hopefully will lead you to the murderer at the end of the day. A laboratory will be at your disposal where you can examine fingerprints and run chemical tests on the clues that you find. At the same time there are suspects who must be checked and interrogated.

In order to optimize the investigation progress you will be divided into teams. That way you could make a competition between your co-workers and see which team is going to solve the mystery first.

All team members will be assigned to different tasks. Some people work best in the field of looking for clues, while others work best in the laboratory analyzing fingerprints, etc. There also have to be some IT specialists breaking codes and analyzing data.

Will the guilty person be arrested or will new victims appear before the case is solved?

From 10 persons
