Tag Master

Now it's time to "tag along" with your smartphones and solve the tasks in order to reach your final destination.

Tag Master is a unique game based on the new scanning technology where you use QR codes in order to reach your goal. When you scan a post on your route, a clue or a task appears that you need to solve in order to find the next post - and at the end your final destination. The concept gives the participants an adventure tour through the city, the forest, the castle or even your company. Since everything is digital, the Tag Master game and its content is very flexible. Each post may contain videos, sounds, tasks or ordinary "trivia" questions.

During the game you are going to solve different types of tasks where all the competences of the participants will be utilized. So, you have the possibility of designing you very own Tag Master game with all sorts of tasks - such as:

"Tag" The Company Murderer
"Tag" Da Vinci
"Tag" The Treasures of Copenhagen
"Tag" The Challenge at the Ramparts

During the TAG Master game, everything will be tracked so that you at the end know which team has been the best – answering most questions and in shortest time.

During dinner we will, of course, announce the winning team.

From 15 to 5.000 participants
